

Adidas

MIDAS System

Adidas Stockport is the latest site to adopt the EMOS-Infineer MIDAS Cashless system. With a population of around 500 staff the EMOS-Infineer system was chosen for various benefits that it will bring:

- Queue times being reduced during peak times
- Remove the use of Cash improving hygiene in areas where manufacturing takes place.
- As service levels improve and the number of pupils using the cafeteria increases, catering and vending revenues also increase substantially

Adidas existing catering was controlled by cash payments. Using cash at the tills slows up the canteen process and makes it difficult to get all staff through the canteen in the allotted lunch time. What slows up the process is the till operatives having to find the correct change. With access cards there is no need for change as the money is credited from their account.

EMOS-Infineer was able to use each Staff member's existing HID access card as an identifier for the MIDAS system. The access card is contactless which allows the staff to swipe and go. When purchases are made the cost is deducted from the value on the staff member's account.

All cards set up within the Emos-Infineer system can have unlimited card purses. It is often easier to think of these purses as pockets holding separate amounts of money.

The administrator may wish to restrict where and when each purse can be spent by selecting certain applications including hospitality. An expiry date can also be set for the card for temporary staff

Adidas currently use the EMOS-Infineer MIDAS system within their premises to allow staff to pay for their food in the Restaurant and coffee dock using their card at the EMOS-Infineer touch screen tills. Visitors can dispense visitor cards from a card dispenser allowing them to use the facility

Staff can top-up their accounts using Note and coin Kiosks located throughout the site

Working with our Partner Optima to provide a faster hygienic service to all staff at Adidas, the Catering Manager Lee Whittaker was impressed by the smooth introduction of the system, the ease of use and the management information available.
